suggestion regarding yet an additional step of the use of product package template cavities. The autopack system represents the state of the art machinery as of the filing date of Applicants' present patent application. One of the shortcomings of these systems is that the filling process could not continue until a new package member was inserted beneath the filling station. In accordance with Applicants' presently claimed invention through utilization of filling individual templates, the template filling process can run essentially continuously while further processing of a filled solid pharmaceutical package has been undertaken.

Applicants further reserve the right to take appropriate action to establish the patentability of the disclosed invention over the listed documents, should one or more of the documents be applied against the claims of the present application.

If there are any additional fees due in connection with the filing of this statement, please charge the fee to our Deposit Account No. 13-0019.
